PROFESSIONAL SUMMARY

Third-year Software Engineering (Honours) student at UNSW (WAM 83.1, Australian citizen). I build and ship products: two products launched solo in 2026, one on the App Store and Google Play, and software lead role on UNSW's Sunswift Racing team. I direct agents at scale, 35 billion tokens in the past 30 days, and I read what they write. Winner of the SENG3011 Optiver Industry Prize.

EDUCATION

- **University of New South Wales (UNSW Sydney) - Bachelor of Engineering (Software) (Honours)** Jan 2024 - Dec 2027
- **WAM: 83.1 (86.4 across 2026) |** UNSW Engineering Leadership Program, first intake 2026 (100 students) | Algorithm Design & Analysis 95 HD, Software Testing & QA 92 HD, Database Systems 89 HD, AI 89 HD, Extended Security Engineering 86 HD, Software Construction 85 HD

EXPERIENCE

Software Engineering Intern (full-time) Sydney, NSW

CSIRO Generation STEM Links @ SportLogic *Jul 2026 - Present*

- Shipped SportLogic Play, the company's first consumer app, to the App Store and Google Play in two months as the only engineer, built from scratch, taking racquet court bookings (Next.js, TypeScript, AWS Amplify, Cognito, DynamoDB). https://play.sportlogic.com.au/
- Built analytics signals, the company's first measure of player demand (searches, opens, saves and booking attempts per venue and suburb), which gives the sales team a ranked list of venues players want that do not yet book online.
- Turning SportLogic's platform, with 60,000 Java methods, into tools an AI agent can call safely through the Model Context Protocol (MCP), so a venue operator can run bookings, memberships, coaching, classes and messaging by asking for them in natural language.

TSS Lead and Infotainment Lead, Software Engineer Sydney, NSW

Sunswift Racing UNSW *May 2026 - Present*

- Lead five software projects on SR8, set to be the world's first road-legal tri-brid (solar, battery and hydrogen) car, now in build: infotainment, telemetry, performance optimisation, warehouse management and timeline display.
- Built seven world class centre-display screens, navigation and an offline AI voice assistant in one term and brought its answer latency down to 0.8s, against 2 to 10 s measured on a Mercedes.

Industry Project Student - Medibank Sydney, NSW

UNSW CDEV3000 Practice of Work *Sep 2026 - Present*

- Proposed Maddy, an AI agent between international students and Medibank for Overseas Student Health Cover, so a student can compare, understand and buy cover in one place, to cut the drop-off in Medibank's most profitable market. Prototype in progress.

RECENT TECHNICAL PROJECTS

SportLogic Play: National Court-Booking App Next.js · TypeScript · AWS Amplify · Cognito · DynamoDB · Google Maps API

Sole Engineer | App Store · Google Play · https://play.sportlogic.com.au *Jul 2026 - Present*

- A phone app where anyone in Australia finds a court near them, sees live availability and books it: 1,900 venues on one map, every state; rebuilt from scratch and published on the App Store and Google Play within two months.
- Built all of it and everything around it: the iOS, Android and web app, a marketing site, the App Store and Google Play listings and screenshots, a 15-second launch film and a 30-second how-to film, a sales deck to pitch to venues, banners, static ads, legal pages.

CCTV Proposal Assistant Next.js · TypeScript · OpenLayers · three.js · Python on Lambda · SQS · DynamoDB · S3 · Cognito · Bedrock

Sole Engineer, for SNAP IT Services, client-confidential *2026 - Present*

- Takes a tender pack (drawings, brief, specifications, site photos and notes) through twelve approved steps to a priced CCTV design and client proposal; every fact carries its source, and every open gap becomes a stated assumption printed in the proposal.
- Reads walls, doors, exits, rooms and wall thickness from the CAD PDF's own geometry and text (OpenCV and OCR for scans) and asks the estimator only about the lines, walls, and objects it was not sure of, so uncertainty is shown rather than invisible.
- Places cameras as a weighted cover on a walkable graph of the floor, coverage cut at walls to IEC 62676-4 identify, recognise and observe distances, in 2D and a live 3D walkthrough; then picks products that fit each camera, routes cable to the head-end and writes a proposal.

Financial Sentiment & Market Event Visualiser Python · HTML · AWS Lambda · API Gateway · S3 · Docker

Full-Stack Developer | https://github.com/Hardik-V/3011_Bravo *Feb 2026 - Apr 2026*

- Winner of the SENG3011 Optiver Industry Prize for engineering excellence. Shows retail traders 60 years of daily price movement against news sentiment as an interactive 3D star map..

TECHNICAL SKILLS

- **Languages:** TypeScript, JavaScript, Python, Java, C, Dart, SQL, GLSL
- **Cloud & Infra:** AWS (Amplify, Cognito, Lambda, API Gateway, DynamoDB, CloudFront, S3, IAM), Google Cloud, Docker, CI/CD, Linux
- **Product Engineering:** Next.js, React, Flutter, Astro, Tailwind, Motion, Three.js/WebGL, OpenLayers, native app wrapping (iOS/Android)
- **AI Systems:** coding agents (Claude Code, Codex, Gemini, Antigravity; open-weight models run locally through Ollama: Qwen, DeepSeek, GLM), MCP server design, agentic workflows, LLM APIs, RAG and embeddings, evaluation harnesses and golden sets
- **Security & Identity:** OAuth 2.0 and OpenID Connect (Google and Apple sign-in), web security (OWASP vulnerabilities), Reverse engineering
- **Backend & Data:** Node.js, Express, REST, PostgreSQL, DynamoDB, Prisma, Pandas, scikit-learn, computer vision, geospatial search
- **Quality:** Vitest, Jest, JUnit, Playwright, production audit tooling, Swagger/OpenAPI
